PROFILE SUMMARY

- Lead Java Full Stack Engineer with **11+ years** of experience designing and delivering scalable enterprise applications using **Java (8–21), Spring Boot, Microservices, React, and Cloud technologies**.
- Proven expertise in modernizing legacy monolithic applications into cloud-native microservices, improving scalability, maintainability, and deployment efficiency across enterprise platforms.
- Strong experience in architecting REST APIs, distributed systems, event-driven applications using Kafka, and performance optimization for high-volume business-critical applications.
- Experienced in technical leadership, solution design, Agile delivery, stakeholder collaboration, and mentoring development teams while driving engineering best practices.
- Hands-on experience with Azure, Docker, Terraform, CI/CD, AI-assisted development (GitHub Copilot, Claude Code), and modern software engineering practices.

TECHNICAL SKILLS

Languages: Java (8–21), JavaScript, React and SQL

Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, RESTful API design and Microservices architecture

Frontend: React, HTML5, CSS3, Responsive Web Design

Java Depth: Concurrency & Multithreading, Virtual threads (Java 21), Streams & Lambdas, collections, JVM & GC tuning

Messaging & Integration: Apache Kafka, event-driven architecture, Swagger, Postman

Databases: Oracle 11g, PostgreSQL, Mongo DB, JDBC, JPA, SQL performance tuning

Testing & Quality: JUnit, Mockito, Log4j / SLF4J, Exception-handling design and Peer code reviews

DevOps & Cloud: Git, GitHub Actions, Jenkins, Maven, Docker, Kubernetes, Ansible, PCF, Terraform and Microsoft Azure

Infrastructure as Code: Terraform (Reusable Modules), Ansible

Monitoring & Observability: Azure Monitor, Log Analytics Workspace, Application Insights, Prometheus, Grafana, AppDynamics.

Tools & Practices: Agile/Scrum, Jira, Confluence, SDLC, sprint planning, requirement analysis

AI & Developer Productivity: GitHub Copilot, Claude & Claude Code (AI-assisted development, code review, refactoring), prompt engineering, RAG (Retrieval-Augmented Generation) pipelines, Agent Skills, MCP (Model Context Protocol) server integration, LLM API integration (Anthropic, OpenAI)

WORK EXPERIENCE

Concentrix — Lead Consultant — Apr 2023 to Present

Key Result Areas:

- Led modernization of enterprise railroad systems by decomposing monolithic applications into Spring Boot microservices, improving scalability and maintainability.
- Designed domain-driven microservices and REST APIs for crew management, scheduling, payroll, and workforce operations.
- Performed architectural analysis of **60+ legacy components** to identify optimal service decomposition strategies.
- Led an offshore team of **5 engineers**, providing architectural guidance, code reviews, and technical mentoring.
- Collaborated with cross-functional teams to resolve production performance bottlenecks and improve system reliability.
- Standardized Swagger/Open API documentation, reducing API integration effort and accelerating developer onboarding.
- Supported blue-green and rolling deployments in Azure, enabling near zero-downtime production releases.
- Participated in architecture governance to ensure consistency, scalability, and fault tolerance across enterprise services

Key Projects:

Project #1: Crew Pro Short Lines: Crew Pro Short Lines (CPSL) is an enterprise railroad domain application supporting crew operations, task scheduling, leave management, and payroll processing to streamline workforce administration and operational efficiency.

Key Highlights:

- Led migration of monolithic modules to Spring Boot microservices, enabling scalable and independent deployments.
- Designed and developed RESTful APIs with clear service boundaries for crew scheduling and payroll workflows.
- Analyzed legacy system components and resolved performance bottlenecks during modernization.
- Collaborated with cross-functional teams to deliver containerized, cloud-ready services.
- Contributed to architecture and design decisions for scalable system evolution

Project #2: UP Crew Pro: Union Pacific Crew Pro railroad crew management and rail crew scheduling provides real-time crew supply and demand matching, diminishes employee qualification information upkeep, minimizes vacation bidding time, ensures Guarantee Payments are awarded correctly, and allows for simplified travel accommodation scheduling.

Key Highlights:

- ② Spearheaded end-to-end engineering of scalable web applications as a Java Full-Stack Developer.
- ② Led daily offshore stand-up calls, managing task distribution and tracking delivery targets.
- ② Engaged directly with clients in Agile ceremonies to capture, analyze, and translate business requirements.
- ② Formulated comprehensive Business Service Definitions and structural Domain Models for core features.
- ② Initialized standardized GitHub repositories and project scaffolds utilizing the Backstage portal.
- ② Developed high-performance backend logic strictly aligned with predefined service definitions and domain models.
- ② Architected integration layers to seamlessly orchestrate data flow between multiple dependent backend services.
- ② Guaranteed code reliability by writing comprehensive unit and integration test suites using JUnit and Mockito.
- ② Cleaned code smells and implemented automated pipelines using GitHub Actions for deployment to Azure Cloud

Ness Technologies — Senior Software Engineer — Sep 2021 to Feb 2023

App Migration – McLane is an American wholesale supply chain services company which distributes grocery and non-food to convenience stores, discount retailers, wholesale clubs, drug stores, military bases, quick service restaurants, and casual dining restaurants throughout the United States. All applications were converting WAS7 to WAS9. During the conversion, scanning vulnerabilities and applying fixes and converted into Maven structure. Some front-end pages of the applications are converted into Angular which were there in Struts, Vadin.

Key Highlights:

- ② Engineered for high-volume document search engines, significantly reducing latency and improving query response times.
- ② Served as a Java Full-Stack Developer, development, and maintenance of enterprise-level web applications.
- ② Participated actively in daily Agile Scrum ceremonies, collaborating with clients to clarify requirements and map out technical deliverables.
- ② Authored comprehensive development approach documents and architectural blueprints for each application to ensure team alignment.
- ② Spearheaded the legacy modernization of front-end user interfaces by successfully migrating outdated **Vaadin** and **Struts** pages to **Angular**.
- ② Transformed legacy monolithic backend codebases (**Struts**, **Servlets**, and **JSP**) into modern, cloud-native **Spring Boot** microservices.
- ② Proactively scanned source code for security vulnerabilities, analysed threat risks, and implemented critical security fixes.
- ② Maintained strict code quality standards by resolving architectural code smells and writing robust automated unit tests using **JUnit** and **Mockito**.
- ② Managed automated build pipelines in **Jenkins** to continuously deploy verified applications to **Pivotal Cloud Foundry (PCF)**.

Mphasis Limited — Senior Software Engineer — Nov 2019 to Aug 2021

FedEx – FXG-MOON is a part of the FedEx Ground channel newly started by FedEx across US and Canada. Our team is part of the Linehaul Operations ART chain which works mostly on the part of Sort and Dispatch Scheduling operations. We are developing our application from scratch. We are developing different endpoints URL's (with Restful web services) that will be consumed by the different teams including the UI team in order to provide Sort and Dispatch operations information across different Facilities in US. The Development scope will be increased in near future

Key Highlights:

- ② Participated in daily Scrum/Standup meetings with international clients to report progress, discuss blockers, and align on project timelines.
- ② Engaged directly with clients to gather, analyse, and translate complex business requirements into technical specifications.
- ② Engineered scalable web applications from scratch, driving the end-to-end development of new, high-performance modules.
- ② Architected and deployed robust, secure, and scalable RESTful APIs using the **Spring Boot** framework.
- ② Developed dynamic user interfaces using **AngularJS** and seamlessly integrated them with backend REST services for optimal data flow.
- ② Designed and implemented integration layers to connect core application APIs with external third-party systems using **SOAP web services**.
- ② Maintained high code quality and system reliability by conducting rigorous **Unit Testing** across both frontend (AngularJS) and backend (Java/Spring Boot) modules prior to deployment.

CGI - Senior Software Engineer — Oct 2014 to Mar 2019

Schroders – Schroders, a premier global asset and investment management firm, the proprietary and core platform ecosystem is engineered to support their complex global investment operations. The critical core software applications and systems used within Schroders include the Portfolio Book of Records (PBR/PBOR), GLM (Global Matching), and related downstream trading applications

Key Highlights:

- ② Creating CI/CD pipelines using Jenkins and Harness.
- ② Translated system requirements into high-level design specifications.
- ② Developed Struts Action Classes to manage front-to-back-end data routing.
- ② Engineered core backend business logic to meet strict client specifications.

- ➡ Designed robust Data Access Objects using Hibernate ORM framework.
- ➡ Configured Hibernate Components to optimize database transaction performance.
- ➡ Managed sprint task distribution by creating and assigning JIRA tickets.
- ➡ Built automated deployment pipelines utilizing Jenkins and Harness.

ACHIEVEMENTS

- ➡ Received **Performance Excellence Award** at Concentrix for leading enterprise application modernization and delivering high-quality releases.
- ➡ Recognized for improving application scalability, performance, and engineering standards through microservices adoption and architecture modernization.

EDUCATION

Bachelor of Engineering / B.Tech | ABR College Of Engineering & Technology, JNTUK | 2009 – 2013
